

## Tripping over the Truth

How the Metabolic Theory of Cancer Is Overturning One of Medicine's Most Entrenched Paradigms

Travis Christofferson

*With a new foreword by Dr. Dominic D'Agostino, PhD, and epilogue by the author*

\$24.95 • Hardcover

6 × 9 • 296 pages

ISBN 978-1-60358-729-7

**Pub Date: January 19, 2017**

“The information presented in this book will have profound consequences for how cancer is managed and prevented.”

—**THOMAS N. SEYFRIED, PhD, author of *Cancer as a Metabolic Disease***

**T**his year almost six hundred thousand Americans will die from cancer. One in two men and one in three women will be diagnosed in their lifetimes.

In the wake of the Cancer Genome Atlas project's failure to provide a legible roadmap to a cure, science writer Travis Christofferson illuminates a promising blend of old and new perspectives on the disease. In this newly updated edition of his book, *Tripping over the Truth*, he takes readers on a compelling historical journey challenging the current paradigm that cancer is a genetic disease and uncovering its metabolic origins.

Christofferson also highlights the efforts of researchers and clinicians who are finding innovative ways around the glacially slow speed and titanic expense of traditional FDA trials and studying the benefits of metabolic therapies in patients with promising results.

The topics Christofferson covers in his book or can talk about in an interview include:

- The history and evolution of present day cancer therapy that spans over the last 100 years
- How cancer became known as a genetic disease and why we need to change this paradigm
- What the metabolic theory of cancer is all about and the profound impact it will have on cancer management and prevention
- A new integrative approach to patient care including nontoxic metabolic therapies such as the ketogenic diet
- Insights into the latest research that supports the effectiveness of treating cancer as a metabolic disease

**TRIPPING OVER THE TRUTH** is a groundbreaking book that challenges everything we thought we knew about cancer. You'll find more information about the author below, and you can read about his ongoing research at [www.singlecausesinglecure.org](http://www.singlecausesinglecure.org). We urge you to assign coverage and will be back in touch soon to follow up.

**Travis Christofferson**, MS, received his undergraduate in molecular biology from the Montana State University Honors Program and a master's degree in material engineering and science from the South Dakota School of Mines and Technology. Today, he is a full time science writer and founder of the cancer charity Single Cause, Single Cure. He lives in South Dakota.
